# Summer school

## CLIMATE-FRIENDLY PRACTICES IN THE CONSTRUCTION INDUSTRY

The Summer School on Climate-friendly practices in the Construction Industry is a three-day program in-person for students and professionals aiming to advance sustainable construction. It combines expert lectures, hands-on lab training, and case studies from leading companies. Participants will explore:

- Ecofriendly, low-emission and recyclable structural solutions
- Sustainable repair with Ultra High-Performance Concrete, Textile Reinforced Concrete
- Sustainable development of pre-cast concrete elements, recycling concrete, cement production
- Experimental demonstration of sustainable design of structural members

1 ECTS credit will be awarded for the participation of this summer school.
